The zencontrol grid control makes commissioning and setup fast and efficient, save days and in some cases weeks when using the zencontrol grid compared to standard building control software. The grid format makes it easy to drill down to the data you need quickly with a dynamically displayed dataset. Change your view to building, floor or area quickly. Copy and paste existing setups easily to replicate the same setting across common controlled items. Identify problem setups and issues quickly as the zencontrol grid identifies and alerts the user of potential problems.

Grid view

Project commissioning is the process of assuring that all systems and components of a building or industrial plant are designed, installed, tested, operated

Monitor and test your site automatically from the zencontrol cloud. Control the Emergency testing schedule, view and email test reports and fault logs quickly and easily. Track the data easily and quickly with quality fitting information which includes the brand, name and serial number of the product. Identify problem products faster with easy to find replacement history. Additionally, zencontrol emergency testing works flawlessly with any DALI compliant emergency product as well as all Ektor Wi-Fi emergency products. zencontrol automatically performs any required duration and function testing of emergency devices as required by relevant building authorities. Automatically generated test results are published to the zencontrol cloud and are available immediately.

The zencontrol plan provides an interface to quickly and visually interact with the building and control system. zencontrol plan shows the current status of connected building luminaires and control gear including activated lights and any failures. Control lights individually and initiate emergency testing directly from the visual interface. With zencontrol plan building monitoring, fault reporting and testing is fast and efficient.
